

Pilot Testing Map

A one-page overview of every surface to test, what to look for, and how to feed it back.
Pair this with PILOT-TESTING-GUIDE.md for the deep dive.

 Pilot window: this week  hqai.vercel.app  jrayner@humanistiqs.com.au

GOLDEN RULE

Test as an Australian SME owner with 20 staff, not as an HR consultant. The product needs to feel obvious to someone who isn't us.

● Solid ● Working - watch closely ● Visual polish queued ● Known limitation

The 11 surfaces

Scan left-to-right, top-to-bottom. Each card is one page of the app.

0 Sign in / Magic link

/login

SOLID

Try. Sign up fresh; sign out; request magic link; open in same browser.

Same browser only. Phone-to-laptop fails by design.

1 Onboarding wizard

/onboarding

SOLID

Try. Walk all 3 steps as a real SME. Pick a real Modern Award.

Plain enough for a non-HR owner?

2 Dashboard home

/dashboard

SOLID

Try. Collapse + drag-resize the sidebar; hover for tooltips.

Does it tell you what to do next?

3 HQ People - AI Advisor

/dashboard/people

SOLID

Try. Topic Picker → seed Q → follow-up message → high-stakes triage.

Plain-English advisor tone? Legally wrong answers?

4 AI Administrator (templates)

/dashboard/people/administrator

SOLID

Try. Generate a Letter of Offer. Edit inline (toolbar: bold, lists, font size, table, page setup). Download PDF.

PDF only by design. Test at least 5 templates.

5 CV Formatter / Contract review

.../administrator/ingest

WORKING

Try. Run a real CV through (DOCX, PDF, TXT). Run a real contract.

PDF extraction flaky in prod - flag if "Could not extract text".

6 HQ Recruit - CV Scoring

/dashboard/recruit/cv-screening

SOLID

Try. Score 3-5 CVs. Override a band. Rename a candidate (pencil on hover). Watch for auto-anonymise.

Is the bias auto-anonymise the right baseline?

7 Shortlist (video + phone)

/dashboard/recruit

SOLID

Try. Send invite link, record in incognito. Then record a phone screen (consent → Start microphone → edit Qs → record → stop → submit).

Stop-recording was broken; confirm it works.

8

Campaign Coach (job ads)

/dashboard/recruit/campaign-coach

POLISH

Try. Walk all 3 steps. Generate the ad.

Sounds like an SME or generic AI ad?

9

Documents library

/dashboard/documents

POLISH

Try. Generate 2-3 docs from other surfaces. Confirm they appear. Re-download one.

Filtering / by-client grouping missing?

10

Settings

/dashboard/settings

SOLID

Try. Upload logo → confirm in next PDF. Try Stripe checkout (test card 4242 4242 4242 4242).

Price ladder \$99 / \$199 / \$379 - right?

11

\$25 Letter of Offer (public)

/offer

FLAGGED

Try. Open in incognito (no login). Walk it as a cold prospect. Don't complete in prod.

Value prop clear in 6 seconds?

The signature flow worth testing end-to-end

STEP 1

Pick template

33 HR / recruitment options

STEP 2

Fill form

Only the minimum needed

STEP 3

AI generates

Sonnet 4 + Fair Work grounding

STEP 4

Edit inline

Word-level rich-text editor

STEP 5

Download PDF

Logo footer + custom margins

MOST USEFUL What we want from this group

You're not testing for bugs - you're testing for **product instinct**. Five lenses we lean on hardest.

1

Would a real SME owner click this?

Flag where the language gets too HR-jargon, or where it talks down.

2

Where does it save 80%?

vs your current consulting workflow. Be ruthless on where it saves nothing.

3

What's the missing feature?

The one thing that would make you confident handing this to a client tomorrow.

4

Where do you mistrust the AI?

Specific examples. "This clause read wrong because X" beats "AI feels off".

5

What would clients break?

Walk as your worst-case-scenario client. Tell us where they'd get stuck.

KNOWN Limits (so you don't flag them as bugs)

- ! **Dark mode** forced off until a full legacy-panel audit.
- ! **DOCX / PPTX / shareable-link export** removed by design - PDF only.
- ! **\$25 anonymous Letter fulfilment** route incomplete - don't complete in prod.
- ! **PDF / PPTX visual QA** on Vercel serverless still pending.
- ! **Documents library + Shortlist top header** on old layout - function works.
- ! **Voyage embeddings + Cohere rerank** may be env-gated in pilot.
- ! **Resend** sender / reply-to needs final-domain verification.
- ! **Citations panel** removed from generated documents on purpose.

REPORTING How to flag issues

- 1 **Tag** by page name (eg "AI Administrator", "Shortlist / phone screen", "CV Scoring").
- 2 **Severity** in plain language (see below).
- 3 **Repro** - one line of steps + screenshot or Loom.
- 4 **Suggestion** if you have one - optional, no design pressure.
- 5 **Daily summary** to Jimmy end-of-day. One Loom beats 100 screenshots.

BLOCKER

Stops the flow

Can't sign in. Can't generate a doc. Error screen with no recovery.

ANNOYING

Slows you down

Hover state wrong, dropdown closes too fast, copy reads weirdly.

POLISH

Looks-and-feels

Spacing, alignment, colour, font weight. Nice-to-have not need-to-have.
